

JEANRICHARD

BRESSEL ALTERNATIV

The Bressel Alternativ model is the fruit of the avant-garde vision of JEANRICHARD combined with traditional watch-making techniques. Equipped with the manufactured JR1000 movement, this very modern model offers a harmoniously decentralised display of the hours, of the minutes, the seconds and of the date as well as of the power-reserve. These indicators create a balance of their own on the modern dial where elements are displayed in ruby red, yet another visible original enhancement.

With the Bressel Alternativ model, JEANRICHARD once again expresses its desire to create timepieces combining classic, yet non-conformist, design, with an original approach to reading time.
